BIRDS • KNOWLEDGE • CONSERVATION

The *Handbook of Australian, New Zealand and Antarctic Birds* (HANZAB) is being produced by the Royal Australasian Ornithologists Union (RAOU). HANZAB is an integral part of the RAOU's mission, which is to work to conserve native birds and biological diversity in Australasia and Antarctica, through the study and management of birds and their habitats, and the education and involvement of the community.

The RAOU is Australia's oldest national conservation organization and the best-established in the field of bird research. Since its foundation in 1901, the RAOU has provided a focus for researchers, both volunteer and professional, working to increase our knowledge of the birds of Australasia. Scientific data are essential for making informed decisions about the management and conservation of birds and their habitats. To this end, the RAOU co-ordinates the national Nest Record Scheme, the Australian Bird Count, and many study programmes of threatened and endangered birds and their habitats. The RAOU is consulted regularly by government organizations, companies, educational institutions and individuals. The *Handbook of Australian, New Zealand and Antarctic Birds* provides an authoritative and scientific base for making decisions about the management of our avifauna and for the directions of future research.

The RAOU has produced two volumes of HANZAB and publishes *Emu*, a quarterly scientific journal and Australia's senior internationally recognized ornithological journal. The RAOU also publishes *Wingspan*, a quarterly magazine for all members, *RAOU Conservation Statements*, the *RAOU Report* series and *RAOU Monographs*. HANZAB continues the RAOU's achievements in publishing: *The Atlas of Australian Birds*, *Shorebirds in Australia* and *Threatened and Extinct Birds of Australia*.
