# INTRODUCTION

Volume 7 is the final volume in the series, and concludes our coverage of the passerines (Order Passeriformes)—the largest and most diverse order of birds, comprising well over half the world's known bird species. At the time of finishing this volume, we have dealt with 394 passerine species, in 42 families, reported in the HANZAB region; no doubt with time and refinements in taxonomic studies there will be more. This volume deals with 169 species, in 27 families, plus summaries of various failed introductions (including in an additional family, Ploceidae). With the completion of this volume, HANZAB has dealt with a total of 957 species.

A full introduction to the series, including the scope and arrangement of each section, and glossaries where needed, was given in Volume 1 and a full revision for most sections was provided in Volume 5. We have followed the style and layout of Volumes 5 and 6 without serious modification. However, we comment in the sections below on matters where there has been some departure in approach from previous volumes, or where there are specific conventions that we feel warrant repeated explanation. Some abbreviations and conventions are used throughout the work; others are applied only to a particular section. All are listed on pages 28–32.

TAXONOMY AND NOMENCLATURE Birds The publication of the *Directory of Australian Birds: Passerines* by Schodde & Mason (1999; CSIRO Publishing, Melbourne [abbreviated throughout this volume as DAB]) has provided the base from which to investigate further the variation in species and subspecies of Aust. birds, and has greatly assisted us in the preparation of this volume. For the first time in contemporary ornithology in the Aust. region, DAB presents a complete listing and analysis of the terminal taxa of Aust. passerine birds.

As in Volumes 3–6, for families and species we continue to follow the arrangement and nomenclature of Christidis & Boles (1994) and the revised version of this work currently in preparation (per L. Christidis & W.E. Boles); the latter will incorporate several changes published in DAB. In this volume, as in previous passerine volumes, details of subspecies and subspecific nomenclature essentially follow DAB except in cases where they conflict with species limits set out in Christidis & Boles (1994, in prep.). Even in those instances, however, the subspecific treatment of DAB is always discussed within the texts and reasons for departure from DAB are given.

The arrangements of the few species recorded in the wider HANZAB region that were not included within the above publications were determined in consultation with L. Christidis and W.E. Boles (representing Birds Australia's Taxonomic Advisory Committee, with L. Christidis also a member of the HANZAB Steering Committee), based on the principles and sources used by Christidis & Boles (1994). For NZ species, scientific nomenclature follows OSNZ (1990), except in cases where it conflicts with Christidis & Boles (1994, in prep.).

English names follow those of Christidis & Boles (1994); English names for species endemic to NZ follow those of OSNZ (1990).

Plants and animals other than birds All scientific names, other than those of birds, were checked against the following references; for those groups for which volumes have been published, we have used the multi-volume series the Flora of Australia, the Fauna of Australia and the Zoological Catalogue of Australia. Plants For Aust., Hnatiuk (1990), ABRS (1993), Bodkin (1991) and, for specific families, George (1986, 1989), Chippendale (1988) and Orchard (1995, 1998); for NZ, Allan (1961), Poole & Adams (1963), and Moore & Edgar (1970); and, more generally or outside these areas, Wallis & Airy Shaw (1973). We have retained Eucalyptus as a single genus. Animals GENERAL INVERTE-BRATES: Marshall & Williams (1972). MOLLUSCS: Vaught (1989). SPIDERS: Main et al. (1985). INSECTS: Taylor et al. (1985); Lawrence et al. (1987), Campbell et al. (1988), Common (1990), CSIRO (1991), Naumann (1993), Lawrence & Britton (1994) and Nielsen et al. (1996). FISH: Paxton et al. (1989), Eschmeyer (1990) and Gommon et al. (1994). AMPHIBIANS AND REPTILES: Cogger et al. (1983) and Cogger (1992). MAMMALS: Bannister et al. (1988) and Strahan (1995).

CUT-OFF DATES FOR TEXTS Most texts for this volume were prepared between the end of 2002 and June 2005, with editing and refereeing extending to September 2005. It is not, however, simple to give an overall cut-off for all sections and texts because preparation of different sections, and completion of texts, took place at different rates. By and large, we have not been able to include in detail material either published, in press or in preparation after Dec. 2004, though we have tried at least to cite important papers that appeared after completion of the texts, to incorporate what information we could, and to comment on major discrepancies between new data and older information within our texts that resulted from such papers. We are grateful to our referees for making this information available and apologize to them for not including it as fully as we would like.

DISTRIBUTION AND POPULATION The detailed descriptions of distribution need to be read in conjunction with the maps, which themselves obviate the need for much text. A map showing the regions, divisions and districts of the various Aust. states that are used in conjunction with town and place names and geographical features to describe distribution is printed on page viii of Part B. The end-paper map for NZ (inside rear cover) shows the regions of the main islands which are used to describe distribution there.

Maps Presentation of maps remains as in previous volumes, with breeding areas shown in full red and areas of occurrence where breeding has not been recorded in half-tone red. Because we know little of the limits of breeding and non-breeding distribution of species in New Guinea and Indonesia, distribution in these regions has usually been shown in half-tone red, giving no indication of breeding range outside the HANZAB region.

MOVEMENTS As in previous volumes, a summary of banding recoveries is given in the final paragraph of this section. Where appropriate, summaries of the results of other banding or radio-tracking studies or other published recovery records are also presented in the final paragraph.

The Banding paragraph begins with a statement giving the total number of birds of that species banded in Aust, (and New Guinea or the sw. Pacific or both if a species also occurs there), between 1953 and June 2003, and the total number of recoveries. The number of recoveries includes repeat recoveries, and is not the number of individuals recovered. These data were extracted from the ABBBS database during May 2005 and include all data entered to that date. Banding recoveries are then presented in categories of distance from banding site (<10 km, 10-49 km, 50-99 km, ≥100 km). For Aust., these figures are calculated from data supplied by the ABBBS, most of which (to 1997) are summarized in Baker et al. (1999). Where a species could have been banded in islands of the sw. Pacific or New Guinea or both, these totals are also incorporated (because they could not easily be extracted from the calculations). The information on recovery rates in distance categories is excluded from species with recent taxonomic splits and where there is subsequent uncertainty as to the specific identity of banded birds. Recoveries were summed for taxa that have been recently lumped but are recorded separately in the ABBBS database.

Details are also provided for all LONG-DISTANCE RECOV-ERIES (≥100 km from banding site) where they are available (including those from before 1984, and records on microfiche), and details of banding and recovery. In many instances, data are presented in the following summarized form:

Kenmore, se. Qld, to Wewak E., Sepik Province, PNG:

$$\frac{2825 \text{ km,}}{(3)} \frac{337^{\circ}, 3 \text{ months}^{D}, \frac{Mar., J, M}{(6)} (7) (8)}{(5)}$$

Where: (1) Banding site; (2) recovery site; (3) minimum distance from banding site to recovery site (great circle distance); (4) direction from banding to recovery site (great circle); (5) number of months elapsed between banding and recovery; a superscript <sup>D</sup> indicates recovery of dead bird; (6) month of banding; (7) age at banding, if known (P = pullus; J = juvenile, 1 = 1 year old, – = unknown or >1 year old); and (8) sex if known (M = male, F = female, – = unknown).

Where appropriate, recoveries showing site-fidelity are also discussed. LONGEVITY from banding records of wild birds is also given (if >12 months).

# REFERENCES

Baker, G.B., et al. 1999. Report on the Australian Bird and Bat Banding Scheme, 1996–97. Environment Aust. (ABBBS), Canberra.

VOICE Sonagrams were made, where suitable recordings were available, using an Apple Macintosh computer. Sounds were digitized at 16-bit resolution and edited using SoundEdit software (Macromedia Inc.). Irrelevant intrusions and background noises were, as far as possible, removed. Sonagrams were made using Canary 1.2.4 software (Bioacoustics Res. Prog., Cornell Lab. Orn.). The analysis used a Hamming window function, a filter bandwidth of c. 350 Hz, smooth display style, 50% overlap and 256 point FFT size. Sonagrams were sent in electronic form (as PICT files) to the publisher. Each sonagram is shown with an overlay, with time on the horizontal scale and frequency on the vertical scale. The amplitude (loudness) of a sound is shown by the darkness of the tracing.

To permit reference to the actual sound used to make a sonagram, published recordings have been used as much as possible, particularly those from the compilations attempting to cover all species in our region (Buckingham & Jackson for Aust.; McPherson for NZ). Recordings from the sound library of the Australian National Wildlife Collection (ANWC), CSIRO Division of Sustainable Ecosystems, Canberra, have been used to complete the coverage. We have also made use of the large collection contributed by D.A. Stewart. The caption to each sonagram lists (as far as is known) the recordist, place and date of the recording, and the source of the recording. If the source is given as the letter P (records, cassettes) or the letter Q (compact discs) followed by a number then the source is a published recording and is listed below.

Sonagrams show 2.5 s, 5 s, 10 s or 20 s of sound. The vertical frequency scale is used regardless of the length of time shown, so that increases or decreases in pitch appear to be more rapid in sonagrams showing longer durations of sound. Reader beware!

In the introductions to earlier volumes we paid tribute to the completion in 12 cassettes of A Field Guide to Australian Birdsong, compiled for the Bird Observers Club by the late R. Buckingham and the late L. Jackson. This compilation has continued to be of great value, and its sounds have been the source of most of the sonagrams. The Bird Observers Club of Australia is issuing a revised edition on compact disc, compiled and edited by H. Plowright, and intended for quick reference (CDs 1-7 are currently published). It does not replace the cassette edition with its comprehensive booklets, and a particular track from the cassette edition may be abbreviated or omitted in the CD edition, which also contains some new recordings. The sonagrams in this volume which are made from calls in A Field Guide to Australian Birdsong are from the cassette edition, and these calls may or may not be included in the CD edition.

BREEDING In our discussion of Season, we have sometimes included a monthly breakdown of breeding records from either the first Atlas of Australian Birds or the New Atlas of Australian Birds (Aust. Atlas 1, 2 [see Abbreviations and Conventions: Standard References]) or both combined. In these cases, the data comes from Atlas databases and not the published books.

PLUMAGES AND RELATED MATTERS These sections are primarily based on examination of material within the collections of museums in Aust., NZ and, less often, elsewhere, as well as a compilation of the available literature. For each species, the editor or editors who undertook the primary research and prepared the sections on Plumages and related matters is named at the start of the Plumages section.

PLUMAGES This section opens with a summary paragraph that describes the overall sequence of plumages and moults from nestling to definitive plumage as far as it is known. The descriptions that follow are based on examination of museum skins unless otherwise stated. We indicate the number of skins of each sex and age that were examined in preparing the descriptions, and the museum collections from which they came. For polytypic species, where more than one subspecies is described separately in Plumages, or for the descriptions of other subspecies in Geographical Variation, the number of skins are also given separately for each subspecies (wherever they are described). If other sources of information (such as examination of live birds) form a major portion of these descriptions, that is also noted here; otherwise they are simply cited in the text.

The appearance of tracts or topographical areas of the birds is described, with the appearance of individual feathers described as appropriate; individual feathers are often described for the wing and tail. Where individual feathers are not described, the description of the tract also applies to the feathers (e.g. if the mantle is described as black, it consists entirely of black feathers). Terms used to describe patterns of feathers are shown in the figures of topography (see HANZAB 5).

Colour descriptions of Plumages and Bare Parts The identity of colour depends on the light in which it has been seen and how precisely it needs to be defined. The greatest problem is that different people perceive colours differently. We have observed all skins in diffuse natural light or under a daylight globe (Philips 60W Daylight). Wherever possible we have used the F.B. Smithe *Naturalist's Color Guide* (Smithe 1975, 1981) in describing colours, though we have not used the names given to colours themselves by Smithe. These were only used by Smithe to convey a sense of familiarity, and are overly technical and somewhat confusing; in the descriptions of plumages and bare parts, colour names given are simple names that convey a better general impression of the colours

involved. However, to identify correctly the exact colour, the identification numbers for the closest equivalent from Smithe's guide are bracketed in the text, after the simple names of colours, e.g. dark brown (121). When the match is not particularly close the colour number is qualified, often with the abbreviation 'c', e.g. dark brown (c121). For colours that have no equivalent in the guide, we place (ne) in brackets after the colour descriptor. If we have not been able to compare colours with the guide and this is not clear from the context, we have denoted such colours by (–). Where two colours are combined, the last-named colour is dominant (e.g. buff-yellow is more yellow than buff); sometimes the suffix 'ish' is added to a colour to denote a weaker tinge of that colour (e.g. buffish yellow has a weaker tinge of buff than buff-yellow).

MOULTS A primary moult-score (PMS) is a sum of the moult-scores of individual feathers (see HANZAB 5 for full discussion of moults and their scoring). In birds with ten primaries the PMS will lie between 0 (moult of primaries has not vet begun) or 50 (moult of primaries has recently finished). When calculating PMS, feathers labelled O and V are scored 0: feathers labelled N are scored 5; and S can equal 5 or 0 depending on the circumstances. For example, a bird that has temporarily suspended moult of primaries may have a moult sequence of  $S^4O^6$ , in which case S = 5 and the PMS = 20. When this bird begins moulting again it may have the sequence  $S^4N^13^1O^4$ , again S=5 and the PMS = 28. However, a bird that has undergone a partial moult of outer primaries may have a moult sequence of O7S3. In this case, S = 0 and the PMS = 0. Unless otherwise stated, we have scored the moult of the primaries of one wing. We have not recorded condition of moult of the remicle, or used it in moult-scores.

MEASUREMENTS, WEIGHTS Measurements of skins, taken by HANZAB researchers (see Editing and Artwork in Acknowledgements below), are given for nearly all species (see HANZAB 5). Published measurements and weights from the literature or unpublished data of live birds or skins are also given where they are available (or references to them are given). Measurements of skins and of live birds are presented separately. For species in which males and females look

similar, sexing of skins has been based on data on labels. We have reduced the numbers of mis-sexed birds in our samples by relying mainly on specimens for which gonads were sketched or described, and on specimens prepared by experienced workers, a process that can involve rather subjective decisions. It is likely that a few mis-sexed specimens were not discarded on this basis; we have mentioned those few cases where it is thought that mis-sexed specimens may have affected the means calculated for either sex. Where published measurements contained obvious errors, we have often included the measurements, with a note of the error.

We have not usually presented data for live birds of unknown sex and from unknown locations given in the annual, and other, reports of the ABBS (e.g. Baker et al. 1999, unless we have very few data for a species.

In addition to the standard measurements in HANZAB 5, we have used the following measurements in some species accounts:

BILL WN: Width of bill measured at anterior edge of nostrils. BILL DN: Depth of bill measured at anterior edge of nostrils.

#### GLOSSARY

BERGMANN'S RULE: An ecogeographical trend whereby populations of a species at lower latitudes and altitudes (warmer environments) have smaller body-mass than those at higher latitudes and altitudes (colder environments).

ALLEN'S RULE: An ecogeographical trend whereby populations of a species at lower latitudes have larger extremities (bills, feet) than those at higher latitudes.

GLOGER'S RULE: An ecogeographical trend whereby populations of a species living in sunnier, more highly irradiated and, commonly, arid environments are paler and less intensely pigmented than those in cloudier and, commonly, wetter environments.

PLANTAR: Pertaining to the posterior surface of the tarsus.

# **ACKNOWLEDGEMENTS**

As with all previous volumes in the series, a great many people have been involved in the preparation of Volume 7 and we are enormously grateful to all who have assisted us. Some of those who have helped us have done so over many volumes or, in some cases, over much of the life of the HANZAB project, and the importance of their assistance cannot be underestimated. Importantly, the Handbook would not have been possible without the continued generous financial support of our sponsors, who are listed on pages 13–16. We have also had a great deal of help from many ornithologists, birdwatchers and others interested in birds in Australia, New Zealand and overseas. Such help has been fundamental to completing this volume, and without it we would not be able to meet the goals of the project or approach the quality of work required.

We are grateful to the members of the Fundraising Committee and the Handbook Fundraising Working Group-Lady Southey AM, Mrs M.S. Ross AM, Mr S.J. Cowling, Mr J.B. Downey, Ms G. O'Donoghue, Ms S.M. Grant and Dr J.G. Hamilton—who have performed the vital task of raising the large sums of money needed to produce this volume. The HANZAB team regret deeply the delays that have accompanied the completion of this final volume, and the difficulties this has caused. Special thanks must go to the late Dr H.N.B. Wettenhall, whose enthusiasm and support for the project were largely responsible for raising the funds needed to see this work through to its completion, and to Lady Southey and Mrs M.S. Ross, who took over the major role in raising the funds needed to complete the series. We must also acknowledge the work of the Council and Research Committee of Birds Australia, and the Chief Executive Officers of Birds Australia, Mr J.B. Downey (to Dec. 2004), and Dr J.G. Hamilton (from Dec. 2004), in ensuring that the project reached its conclusion. The members of the HANZAB Steering Committee—Mr S.J. Cowling (Chair), Dr B.D. Bell, Dr L. Christidis, Dr S.J.J.F. Davies, Mr J.B. Downey, Dr J.G. Hamilton, Mr P.J. Higgins, Dr A. Lill, Mr R.H. Loyn, Dr P. Olsen and Ms H. Fawcett (OUP)—have worked to ensure the overall quality and direction of this work and the completion of the work to its stated goals and standards.

We are once again indebted to Derrick Stone, who was responsible for the design and layout of the volume and whose forbearance, and commitment to the project, has produced a book of the highest standards. We must also thank V. Somerset, J. Missen, D. Meagher and J. Anderson, who read and edited all the texts for Oxford University Press, and whose attention to detail picked up many errors or raised questions that needed to be asked about the text. Lastly we must thank all the staff at Oxford University Press in Melbourne involved in the production of this volume, especially G. Corridon, H. Fawcett and P. Wilson, with whom we have worked closely.

# Museums and other official organizations

Throughout the production of this series, we have received much help and been generously provided with facilities by museums throughout Australia, New Zealand and overseas. The curators of birds at such museums are thanked for allowing us to study the collections in their care; without this we would not have been able to complete the monumental task of describing the plumages and other external morphology of all the species occurring in the HANZAB region. We are especially grateful to Dr L. Christidis (now Australian Museum, Sydney), Mr R.M. O'Brien and Mr N.W. Longmore at the Museum of Victoria, who, throughout the production of HANZAB, have provided a permanent base for the preparation of texts for Plumages and related matters, assisted with the preparation of the colour illustrations, arranged loans of material from other museums, and helped us with reference material that was hard to obtain; our task would be difficult, if not impossible without this help. Similarly, we are also very grateful to R. Schodde, I.I. Mason, R.T. Chesser, I.C. Wombey, M. Clayton, P.J. Fullagar and R.P. Palmer of the Australian National Wildlife Collection, CSIRO Division of Sustainable Ecosystems, Canberra, who also provided a permanent base for the preparation of Plumages and related matters, and allowed other Handbook staff to use the collection and facilities as needed, most notably in the preparation of Voice texts and the colour illustrations. In NZ, J.A. Bartle, at the Museum of New Zealand Te Papa Tongarewa, Wellington, allowed our workers to spend long periods there and provided a base for their work in NZ; A.J.D. Tennyson also helped in many ways while our workers were at the Museum. Curators at other museums throughout Australia and New Zealand also provided much help. We thank B.I. Gill. Auckland Institute and Museum; W.E. Boles and L. Christidis, Australian Museum, Sydney; P. Scofield and G.A. Tunnicliffe, Canterbury Museum, Christchurch; P. Horner, Northern Territory Museum and Art Gallery, Darwin; H. Janitsky, Queensland Museum, Brisbane; T. Scarborough, Queen Victoria Museum and Art Gallery, Launceston; P. Horton and M. Penck, South Australian Museum, Adelaide; K. Davidson, Tasmanian Museum and Art Gallery; and R.E. Johnstone, Western Australian Museum, Perth.

In NZ, we must thank all those who helped with the production of this volume, especially Brian D. Bell, who provided lists of potential contributors and reviewers for species that occur there, chased up banding data, and continued as a member of the HANZAB Steering Committee; and Paul Scofield, who assisted with many suggestions for reviewers, and some extremely useful photocopying from the library of the Canterbury Museum. We would also like to thank the NZ Department of Conservation and Auckland Regional Council, which generously allowed their employees (I. Flux and T. Lovegrove respectively) time to prepare their contributions for this volume (see Contributors and Reviewers). We, and J.G. Innes, acknowledge the support of the Foundation for Research, Science and Technology (under contract CO9X0204). Those who assisted by reviewing or contributing to this volume are listed fully below, but we would like to take this opportunity to express our sincere gratitude, and our indebtedness, to all those in NZ who devoted so much time and effort, over many years now, either to prepare the texts for NZ species or to bring to acceptable

standard the often rather poor efforts we managed to produce from this side of the Tasman Sea, Sincere thanks,

Thanks must also go to the staff of the Australian Bird and Bat Banding Scheme (ABBBS) of Environment Australia in Canberra who supplied and helped with analysis of banding recovery records and made available biometric data for birds within this volume, especially D. Drynan, who provided many banding summaries, and cheerfully answered a host of detailed queries; G.B. Baker, who gave permission for use of the data; and E.B. Dettmann, who extracted much of the data for us in her own time.

We are very grateful to P. Larner and staff of the library of the CSIRO Division of Sustainable Ecosystems, Canberra, for use of the collection and for assistance freely given.

At the Birds Australia National Office, librarian Evelyne Scott helped in many ways with obtaining references and books for us-may you enjoy a long, happy and well-deserved retirement from the overly demanding Handbook project. Thanks should also go to Bob Cross who, while not directly assisting HANZAB, has been intimately involved in keeping the H.L. White Library running and in getting the journals on the shelves for many years now, and has often brightened our days when he has been in the office.

For kind permission to reproduce black-and-white illustrations by W.T. Cooper in The Birds of Paradise (Frith, C.B., & B.M. Beehler. 1998. OUP, Oxford) and in Emu, and those of M.I. Bamford in The Zebra Finch (Zann, R.A. 1996. OUP, Melbourne) we thank the artists, authors and publishers.

Special assistance

Throughout the preparation of Volume 7 we continued to be assisted by the work of the late J.D. Waterhouse, who compiled a complete author and subject index to Emu, which he freely made available to Handbook staff (and which is now lodged at the Birds Australia National Office). Names and nomenclature L. Christidis and W.E. Boles, as representatives of the Birds Australia Taxonomic Advisory Committee, cheerfully provided taxonomic and nomenclatural advice whenever it was required. Field Identification, Plumages and related matters, and Artwork Many people helped by providing data, photographs, slides and sketches that were used in the preparation of the sections on Field Identification and Plumages and related matters and for the preparation of the colour illustrations. We thank: R.P. Allen, W.E. Boles, P. Beaumont, A. Boyle, M.G. Brooker, A.H. Burbidge, M.I. Carter, G.A. Carpenter, G.S. Chapman, W. Cherry, B. Chudleigh, M. Clayton, J.N. Davies, R. Drummond, D.W. Eades, P. Evans, K. & L. Fisher, C.B. & D.W. Frith, C.J. Hassel, P.J. Higgins, A.J. Huggett, A.F. Hurst, D.J. James, J. Lewis, R. Mackenzie, P.R. Marsack, J.S. Matthew, J. Moverley, J.A. Nicholls, L. Nielsen, M. Norgard, R.A. Noske, D.J. Onley,

A. Palliser, R.M. Patterson, L. Pedler, L.N. Robinson, A.C. Rogers, K.G., A. & D.I. Rogers, A.B. Rose, C.S. Roselaar, C.H. & J.L. Sandbrink, J. Seymour, H. Shirihai, A.F. Silcocks, G. Swann, C.L. Tzaros, K. Uhlenhut, F.W. van Gessel and D. Watts. Distribution and Population G.A. Carpenter provided much unpublished data on the distribution of birds in SA. Movements In addition to the assistance of the ABBBS (above), D. Ingwersen helped at Birds Australia to extract banding data from files provided by the ABBBS. Food A. O'Callaghan assisted with the literature search, and S.I.S. Debus, G. Holmes and A.I. Leishman provided much useful information. Voice The following helped by sending recordings or in other ways: the late R. Buckingham, M.L. Hall, the late L. Jackson, L.B. McPherson, and H. Plowright. Particular thanks to C.B. Frith, D.W. Frith, P.I. Fullagar, G.P. Johnson, G. Kaplan, T.G. Lovegrove, L.E. Molles, E. Slater, D.A. Stewart and I.R. Waas for assistance with voice texts. Breeding R.M. O'Brien provided some egg measurements and reference material. Family introductions We must thank Dr P.B. (Barry) Taylor and the editors of the Handbook of the Birds of the World (Lynx Edicions, Barcelona) for permission to use a draft version of the Family Campephagidae (Cuckoo-shrikes) in preparation of our introduction to this family.

#### General

We must thank the many people who have helped, voluntarily or otherwise, at the Birds Australia National Office and elsewhere, who made it possible to complete this volume: they and many other people assisted in a great variety of ways in the preparation of this volume. We particularly thank: A. Butcher, A. O'Callaghan, A. Silcocks, J. Smith, J. Suftin, M. Sweeny, and C. Williams.

We are grateful to J. Henderson, of Environment Australia, Norfolk I., who kindly spent much time photocopying reports

unavailable on the mainland.

On various trips, accommodation was provided or offered by J.S. Boyd (Canberra), K. Burrell (Canberra), A.R. Johnson (Melbourne), C. McIntosh and P. Collins (Adelaide), and B. Rochford (Auckland).

For Birds Australia, the bulk of the proof-reading for this volume has been done by G.D. Price, with much assistance from A.M. Dunn, P.J. Higgins, J.S. Matthew and J.M. Peter.

Lastly, the members of the Handbook team extend our sincere thanks and appreciation to our spouses, partners and families, who cannot fail to be in some way involved in, or affected by, a project of this size. Their patience, advice and assistance in various ways, over a great many years for some, has been a valuable yet unsung contribution to the project. Thank you.

## **EDITING AND ARTWORK**

#### **EDITING**

Texts were prepared by the editors indicated below except for those accounts where we received an external contribution (which are not listed below; see Acknowledgements [Contributors and Reviewers]), in which case the contribution was edited as indicated.

Field Identification K.A. Bartram prepared or edited most accounts, with the following exceptions: D.W. Eades prepared accounts for most Dicruridae (Myiagra ruficollis, M. rubecula, M. cyanoleuca, and Rhipidura other than

R. leucophrys), part of the Artamidae (Artamus, Cracticus) and co-authored, with K.A. Bartram, the texts for the Alaudidae and part of the Motacillidae (Motacilla); A. Rogers prepared accounts for part of the Dicruridae (Machaerirhynchus flaviventer, Monarcha, Arses, Myiagra alecto and M. inquieta, Grallina cyanoleuca, Rhipidura leucophrys and Dicrurus bracteatus) and Oriolidae (Sphecotheres); J.R. Starks prepared accounts for the Emberizidae, Nectariniidae, Dicaeidae, Pycnonotidae, part of the Sylviidae (Megalurus), and the Sturnidae; and M.J. Antos prepared accounts for parts of the Zosteropidae (Zosterops citrinellus, Z. luteus) and Muscicapidae (Turdus merula, T. philomelos). Most Field Identification texts were also reviewed by editors of Plumages and related matters, and J.S. Matthew in particular added greatly to the texts and clarified many points of confusion. For Habitat, A. Williamson prepared or edited accounts for the Dicruridae, Campephagidae, Oriolidae, Artamidae (except Gymnorhina tibicen), Paradisaeidae, Corcoracidae, Callaeidae and Alaudidae; and A.J. Dare did so for Gymnorhina tibicen (in Artamidae), the Corvidae, Laniidae, Ptilinorhynchidae, Turnagridae, and Prunellidae to Sturnidae except for the Motacillidae other than Anthus novaeseelandiae, which were prepared by J.M. Peter. The accounts for Distribution and Population were all prepared by J.M. Peter. For Movements, R.N. Price prepared accounts for the Dicruridae, Campephagidae and Oriolidae; M.J. Hewish prepared accounts for parts of the Artamidae (Artamus leucorynchus, A. cinereus, A. cyanopterus, A. minor, and Cracticus), the Prunellidae, and parts of the Passeridae (P. montanus) and Estrildidae (Taeniopygia bichenovii, Poephila, Neochmia phaeton, N. ruficauda, N. modesta, Stagonopleura, Emblema, and Lonchura punctulata and L. flaviprymna); and the rest were prepared or edited by J.L. O'Connor. K.Y. Al-Dabbagh prepared the Food sections for the Dicruridae, Campephagidae, Oriolidae and Artamidae; G.D. Price prepared the accounts for the Paradisaeidae, Corvidae, part of the Ptilonorhynchidae (Ailuroedus melanotis, A. crassirostris, Chlamydera nuchalis and C. cerviniventris), the Sylviidae and Muscicapidae; and S.A. Chambers prepared or edited the rest.

The accounts for Social Organization and Social Behaviour were mostly prepared or edited by A.M. Dunn, with the following exceptions: P.S. Lansley prepared most of the Dicruridae (except Dicrurus bracteatus); R.N. Price prepared the accounts for Dicrurus bracteatus (in Dicruridae), the Campephagidae and Oriolidae, part of the Artamidae (Artamus), the Corvidae, Corcoracidae, Callaeidae, Alaudidae, Prunellidae and Motacillidae, and parts of the Estrildidae (Neochmia, Stagonopleura, Emblema, Lonchura and Heteromunia) and Hirundinidae (Cheramoeca leucosternus, Hirundo neoxena); J.L. O'Connor prepared most of the Sylviidae (except Bowdleria rufescens), and parts of the Hirundinidae (Hirundo nigricans, H. ariel), Muscicapidae (Turdus merula) and Sturnidae (Aplonis metallica); and S.A. Chambers prepared part of the Muscicapidae (Turdus poliocephalus, T. philomelos). For Voice, T. Howard prepared or edited the accounts for the Dicruridae to the Corcoracidae; A.M. Dunn prepared or edited the accounts for the Callaeidae to the Muscicapidae, except for various introduced species, which were written by J.M. Peter; and A.M. Dunn also wrote the accounts for the Sturnidae. T. Howard made all sonagrams. For Breeding H.M. Gibbs prepared accounts for the Dicruridae and part of the Artamidae (Gymnorhina); G. Arnold and S.A. Chambers prepared the Oriolidae and most of the Campephagidae (except C. novaehollandiae); J.R. Starks prepared accounts for C. novaehollandiae (in Campephagidae), part of the Artamidae (Artamus), and all accounts for the Corvidae, Ptilonorhynchidae, Passeridae, Estrildidae, Pycnonotidae, Sylviidae, Zosteropidae and Sturnidae; A.M. Dunn prepared the Paradisaeidae and part of Artamidae (Cracticus, Strepera); and the remaining texts were prepared or edited by S.A. Chambers.

Plumages and related matters were mostly prepared by J.S. Matthew, except for the Dicruridae, which were partly or wholly prepared by F.J.G. Copley and A.M. Dunn, and most of the Estrildidae, which were partly prepared by A.M. Dunn.

(The editors responsible for these sections are indicated at the start of the Plumages accounts.)

Mastheads For each species, I.J. Mason and R. Schodde prepared the nomenclatural details of the original description and the summaries of subspecies. The etymologies of the scientific names and, as needed, recommended English names, were prepared by J. Jobling. Ectoparasites The list of ectoparasites of Australian, New Zealand and Antarctic birds (Appendix I) was prepared by M.D. Murray, R.L. Palma, R.L.C. Pilgrim and M. Shaw. Aboriginal names (Appendix II) were compiled by J.M. Peter and M.B. Peter.

Family introductions The introductions to the families were largely prepared by the section editors. The formal diagnoses and discussions of plumages and related matters were prepared by J.S. Matthew. The summaries for Habitat were prepared by A.J. Dare (Dicruridae to Estrildidae) and by J.L. O'Connor (Fringillidae to Sturnidae); for Movements by J.L. O'Connor; for Food by S.A. Chambers; for Social Organization and Social Behaviour by A.M. Dunn; for Voice by A.M. Dunn, except Dicruridae, Corvidae and Ptilonorhynchidae by T. Howard; Breeding by S.A. Chambers; and summary of status and threats by S.J. Cowling, J.M. Peter and P.J. Higgins.

G.D. Price compiled all texts, undertook a preliminary edit of the texts, had the painstaking task of entering many of the edits of the senior editors, conducted final checks on the accounts before submission to the publisher, did much of the proof-reading of the manuscript, as well as co-ordinating our other proof-readers, and checked the blueprints. He also did a superb job as Director of Tipping and Sweepstakes over the last few years. S.A. Chambers, A.M. Dunn, J.S. Matthew, J.L. O'Connor and G.D. Price assessed and entered the bulk of the review comments we received; other Section Editors assisted as required. P.J. Higgins, J.M. Peter and S.J. Cowling edited all species accounts and introductory matter. J.B. Hurley kindly assisted with final edits on the accounts for the Motacillidae and Sylviidae.

ARTWORK The colour plates were painted by P.R. Marsack (pll 1, 2, 7-8, 12-13, 19-20, 25-28, 32-37 and 40-42), N. Day (pll 3, 5, 14-17, 21-22, 24, 31, 38-39, 43 and 51-54), K. Franklin (pll 10-11, 18, 23, 30 and 44-50), P.J. Slater (pll 4 and 6), J. Luck (pl. 9), and D.J. Onley (pl. 29). Co-ordination and planning of colour plates was managed by D.W. Eades (pll 1-11) and J.S. Matthew (pll 12-54).

Line drawings were prepared by P.R. Marsack (pp 1428, 1429, 1437, 1438), A.K.H. Gorringe-Smith (pp 143, 621, 666), J.S. Matthew (pp 155, 204, 468, 525, 640, 642, 651, 712, 836, 1378, 1379, 1383, 1435, 1543, 1683, 1707, 1710, 1830, 1833), F. Knight (pp 310, 693, 737, 742, 783, 1655), N. Day (p. 1619) and J.M. Peter (p. 1017).

Further, the following illustrations were reproduced from published sources: W.T. Cooper (illustrations on pp 637, 647, 648, reproduced from Frith, C.B., & W.T. Cooper. 1996. Emu 96[2]: 102-13, June 1996; and on pp 657, 665, 657, reproduced from Frith, C.B., & B.M. Beehler. 1998. The Birds of Paradise. OUP, Oxford); and M.J. Bamford (illustrations on pp 1113, 1114, 11115, reproduced from Zann, R.A. 1996. The Zebra Finch. OUP, Melbourne).

The distribution maps were prepared by S.J. Cowling, based on texts of Distribution and Population and other information provided by J.M. Peter.

# CONTRIBUTORS AND REVIEWERS

Many people have assisted with the production of this volume by preparing or reviewing texts, either in part or in full, for a species or for groups of species. Birds Australia insists on the review of all Handbook texts by ornithologists or other biologists expert in particular fields, or with expertise in individual species or groups of species. Reviewing of texts is an essential part of the preparation of the texts and we would like to thank all who made the time to assist us in this regard. Their assistance has greatly improved the accuracy and completeness of the texts. However, any errors within the text remain the responsibility of the editors. We also apologize for any inadvertent omissions from the following list.

While it is not possible to attribute credit in detail for all texts reviewed by individuals, a number of people provided special assistance by reviewing substantial numbers of species accounts in this volume (in many cases continuing their ongoing and invaluable assistance to this project). We thank G.S. Chapman, S.J.S. Debus, C.B. & D.W. Frith, C.J. Hassell, G. Holmes; D.J. James, R.H. Loyn, A.K. Morris, D. Myers, L. Nielsen, J. Wieneke and I.A. Woxvold. Many ornithologists in NZ also volunteered considerable time and effort in helping with the NZ species, and we greatly thank them all for their outstanding help.

The contributors listed below prepared most of the species accounts listed, and the sections prepared are usually identified in the accounts themselves. In all cases, those on Plumages and related matters were prepared by HANZAB editors. Contributors later reviewed the whole accounts they

prepared and often contributed additional information. For this volume we have had several external authors prepare complete accounts for a number of species (with the exception of Plumages and related matters, which were prepared by J.S. Matthew) but, unlike earlier volumes, we recommend that these accounts be cited individually as indicated below. A recommended citation for such accounts is in the form: Lovegrove, T.G., & J.S. Matthew. 2006. 'Philesturnus carunculatus Saddleback.' In: Handbook of Australian, New Zealand and Antarctic Birds. Volume 7: Boatbill to Starlings. Edited by P.J. Higgins, J.M. Peter & S.J. Cowling. Oxford University Press, Melbourne.

### Contributors

C.B. Frith, D.W. Frith & J.S. Matthew: Spotted Catbird, Green Catbird, Tooth-billed Bowerbird, Golden Bowerbird, Regent Bowerbird, Satin Bowerbird, Spotted Bowerbird, Western Bowerbird, Great Bowerbird, Fawn-breasted Bowerbird.

J.G. Innes, I. Flux, J.S. Matthew, L.E. Molles & J.R. Waas: Kokako.

T.G. Lovegrove & J.S. Matthew: Saddleback.

In addition to the above contributions, G. Kaplan prepared draft accounts for the Social Organization, Social Behaviour and Voice sections of the Australian Magpie Gymnorhina tibicen; and G.P. Johnson contributed the Voice account for Grey Butcherbird Cracticus torquatus.

# ABBREVIATIONS AND CONVENTIONS

Compass directions

N, NE, E, SE, S, SW, W, NW + standard intermediates. Note, however, when used as an adjective (e.g. northern Aust., north-eastern coast, and so on) the style is lower case with a full point: n., ne., e., se., s., sw., w., nw., and so on.

#### Units

Standard SI units and their recommended abbreviations are followed throughout.

Statistical arrangement

Throughout, simple statistical data are presented in the form: MEAN (STANDARD DEVIATION; RANGE; SAMPLE SIZE), e.g. 285 g

(5.23; 276–298; 14). By presenting the data in this way, if any one figure is missing from within the brackets it is obvious what it is. If only the range is available, it is presented in brackets, e.g. 253 g (276–298). If only standard deviation is available it is presented as MEAN±STANDARD DEVIATION, e.g. 253±5.23 g. If only the sample size is available it is presented as MEAN (n=...), e.g. 253 g (n=14).

In the sections on Measurements and Weights, the last column of the tables indicates significance of the t-test of the sample means:

ns no significant difference

- \* means are significantly different at 0.05
- \*\* means are significantly different at 0.01

#### BIRD REPORTS

As with other standard references, these are cited in an abbreviated form. For most, the name of the report is followed by the year that the bird report covers (not the year in which the report was published); for Classified Summarised Notes and Tasmanian Bird Reports, the volume number of the journal in which the report is published is given instead.

CSN Classified Summarised Notes, published in Notomis (OSNZ), which, for its first few volumes was published as NZ Bird Notes. Also note that a few CSN (or their equivalent) were published in Reports and Bulletins of the OSNZ (Rep. Bull. OSNZ) which preceded NZ Bird Notes.

### STANDARD PLANT AND ANIMAL NAMES

Some common species or genera of plants and animals are referred to often and throughout the text. For simplicity, where such species have recognized English names, their scientific names are not given in the accounts. The scientific names of these species are given below.

PLANTS					
Eucalypts	Eucalyptus	Lemon-scented		Salmon Gum	E. salmonophloia
Alpine Ash	E. delegatensis	Gum	E. citriodora	Scribbly Gum	E. signata
Apple Box	E. bridgesiana	Manna Gum	E. viminalis	Shining Gum	E. nitens
Bimble Box	E. populnea	Marri	E. calophylla	Silvertop Ash	E. sieberi
Black Box	E. largiflorens	Messmate	E. obliqua	Snappy Gum	E. racemosa
Black Sallee	E. stellulata	Moreton Bay Ash	E. tessellaris	Snow Gum	E. pauciflora
Blackbutt	E. pilularis	Mountain Ash	E. regnans	Southern Mahogany	
Blakely's Red Gum	E. blakelyi	Mountain Grey		Spotted Gum	E. maculata
Blue Mallee	E. gamophylla	Gum	E. cypellocarpa	Sydney Peppermint	E. piperita
Brittle Gum	E. mannifera	Mountain Gum	E. dalrympleana	Tallow-wood	E. microcorys
Broad-leaved		Mugga	E. sideroxylon	Tuart	E. gomphocephala
Stringybark	E. caliginosa	Narrow-leaved		Variable-barked	
Brown Barrel	E. fastigata	Ironbark	E. crebra	Bloodwood	E. dichromophloia
Brown Stringybark	E. baxteri	Narrow-leaved		Wandoo	E. wandoo
Coolibah	E. microtheca	Peppermint	E. radiata	White Box	E. albens
Darwin Box	E. tectifica	New England		White Stringybark	E. globoidea
Darwin Stringybark	E. tetrodonta	Peppermint	E. nova-anglica	Woollybutt	E. longifolia
Darwin Woollybutt	E. miniata	Northern Grey		Yellow Bloodwood	E. eximia
Desert Mallee	E. concinna	Ironbark	E. siderophloia	Yellow Box	E. melliodora
Flooded Gum	E. grandis	Pear-fruited Mallee	E. pyriformis	Yellow Gum	E. leucoxylon
Forest Red Gum	E. tereticornis	Pink Bloodwood	E. intermedia	York Gum	E. loxophleba
Ghost Gum	Е. рариапа	Pink Gum	E. fasciculosa	Yorrell	E. gracilis
Giant Mallee	E. oleosa	Red Bloodwood	E. gummifera	Mimosaceae	
Gimlet	E. salubris	Red Ironbark	E. tricarpa	acacias	Acacia
Grey Box	E. microcarpa	Red Mahogany	E. resinifera	Black Wattle	A. auriculiformis
Grey Ironbark	E. paniculata	Red Mallee	E. socialis	Blackwood	A. melanoxylon
Gully Peppermint	E. smithii	Red Stringybark	E. macrorhyncha	Brigalow	A. harpophylla
Jarrah	E. marginata	River Peppermint	E. elata	Brown Salwood	A. aulacocarpa
Karri	E. diversicolor	River Red Gum	E. camaldulensis	Coastal Wattle	A. sophorae

Cootamundra		Carabeen	Sloanea langii	Quince	Cydonia vulgaris
Wattle	A. baileyana	Celerywood	Polyscias elegans	Sweetbriar	Rubus rubiginosa
Dead Finish	A. tetragonophylla	Cherry Ballart	Exocarpos	Nuts	
	A. cambagei		cupressiformis	Chestnuts	Castanea sativa
	A. pycnantha	Cooktown Ironwood		Peanut	Arachis hypogeae
Jam	A. acuminata		chlorostachys	Pistachio	Pistacia vera
	A. shirleyi	Cunjevoi	Alocasia	Walnut	Juglans nigra
Mulga	A. aneura		macrorrhizos	walnut	Juglans
Pindan Wattle	A. tumida	Deep Yellow-wood	Rhodosphaera	Vegetables	
Sallow Wattle	A. longifolia		rhodanthema	Potato	Solanum
	A. dealbata	Fern-leaved			tuberosum
Weeping Myall	A. pendula	Grevillea	Grevillea pteridifolia	Cereals	
Western Myall	A. papyrocarpa	Flame Heath	Astroloma	Canola	Brassica napus
Casuarinaceae			conostephioides	Corn or Maize	Zea mays
casuarinas	Casuarina and	Geebung	Persoonia linearis	Oats	Avena sativa
	Allocasuarina	Gorse	Ulex europaeus	Safflower	Carthamus
Belah	C. cristata	Grey Bolleywood	Neolitsea dealbata		tinctorius
Black Oak	C. pauper	Grey Myrtle	Backhousia myrtifolia	Sunflower	Helianthus
Black Sheoak	A. littoralis	Hoop Pine	Araucaria		annua
Buloke (Bull Oak)	A. luehmannii		cunninghamii	Wheat	Triticum aestivum
Coast Sheoak	C. equisetifolia	Lacebark	Brachychiton discolor	Common genera	
Compass Bush	A. pinaster	Lantana	Lantana camara	acacia	Acacia
Desert Oak	A. decaisneana	Leichhardt Tree	Nauclea orientalis	banksias	Banksia
Drooping Sheoak	A. verticillata	Lilly Pilly	Acmena smithii	casuarinas	Casuarina and
Dwarf Sheoak	A. pusilla	Monterey Pine	Pinus radiata	Casuarinas	Allocasuarina
Forest Oak	A. torulosa	Moreton Bay Fig	Ficus macrophylla	cypress-pine	Callitris
River Sheoak	C. cunninghamiana	Myrtle Beech	Nothofagus		Eucalyptus
	A. muelleriana	Myrtie beech		eucalypts	Xanthorrhoea
Slaty Sheoak		NI - f - 11 - I - I - I - Di	cunninghamii	grass-tree	Grevillea
Swamp Oak	C. glauca	Norfolk Island Pine		grevilleas	
Western Sheoak	A. fraseriana	D	heterophylla	lignum	Muehlenbeckia;
Proteaceae	D. I. a	Peppercorn	Schinus molle		this would be,
Bull Banksia	Banksia grandis	Port Jackson Fig	Ficus rubiginosa		in most cases,
Coast Banksia	B. integrifolia	Purple Cherry	Syzygium crebrinerve	1 1	M. cunninghamii
Heath Banksia	B. ericifolia	Red Ash	Alphitonia excelsa	paperbark	Melaleuca
Old Man Banksia	B. serrata	Rough-barked	14 174 N 104 104 W	tea-tree	Leptospermum
Silver Banksia	B. marginata	Apple	Angophora floribunda	willow	Salix
Wallum Banksia	B. aemula	Slender	4000 D D V	Participation of the same	
Melaleuca, tea-tree		Cypress-pine	Callitris preissii	ANIMALS	AND THE RESERVE AND THE RESERV
Cajuput	Melaleuca cajuputi	Smooth-barked		Black Rat	Rattus rattus
Coastal Tea-tree	Leptospermum	Apple	Angophora costata	Brown Hare	Lepus capensis
	laevigatum	Southern Sassafras	Atherosperma	Brown Rat	Rattus norvegicus
Liniment Tree	Melaleuca		moschatum	Cat	Felis catus
	symphyocarpa	Sweet Bursaria	Bursaria spinosa	Cattle	Bos taurus
Prickly Tea-tree	Leptospermum	Sweet Pittosporum	Pittosporum	Common Brushtail	
	juniperinum		undulatum	Possum	Trichosurus
Swamp Paperbark	Melaleuca ericifolia	Turpentine	Syncarpia glomulifera		vulpecula
Weeping Paperbark	M. leucadendra	Water Gum	Tristaniopsis	Common Ringtail	
Other plants			laurina	Possum	Pseudocheirus
African Boxthorn	Lycium	White Cedar	Melia azedarach		peregrinus
